

PEDRO BASÍLIO

Customer Success & Customer Value Leader | Enterprise Retail SaaS | LATAM

Recife, Brazil | +55 81 98188-5939 | pedrocostab@gmail.com | linkedin.com/in/pedrocostab

SUMMARY

Customer Success leader with 6 years at a global AI-driven retail optimization SaaS, promoted from analyst to regional head to global product lead. Took over a USD 3.5M ARR LATAM portfolio with 74% of revenue at risk, recovered USD 1.2M ARR from accounts that had already filed to cancel, and closed at 84% gross revenue retention while lifting healthy accounts from 27% to 75% of the book. Turned recovered accounts into growth, including a 104% contract expansion and multi-country rollouts. Now building the company's global enablement function from zero. Trilingual: Portuguese, English, Spanish.

PROFESSIONAL EXPERIENCE

ONEBEAT | *AI-driven inventory optimization SaaS for enterprise retail* | Remote (HQ: Ramat Gan, Israel) | Jun 2020 – Present

Global Product Expert | Jul 2026 – Present

- Built Onebeat's global enablement function from zero, replacing case-by-case regional support with a standard program: Onebeat Academy, an internal learning platform with 18 modules that cover the whole product, plus a tracker that scores every employee by track and test.
- Act as the last resort on the most critical accounts: run the diagnostic sessions with the client, propose ways to fix the problem, deliver and implement the plan, then train the account team to keep it running.
- Run live product sessions weekly for three groups split by time zone, across APAC, EMEA and the Americas: 50 people in five departments, plus one week of training on site in Israel. Every session ends with a mandatory test, to check what people learned and not who showed up. 88% average so far.
- Launched ARK, an internal Q&A platform with SLA and escalation rules. It puts every product question from the global team in one place and feeds a local LLM, so knowledge that lived in people's heads became searchable.

Head of Customer Success, LATAM | Apr 2025 – Jul 2026

- Took over a USD 3.5M ARR portfolio: 55 enterprise retail accounts in 12 countries, leading a team of 9 (6 analysts, 3 CSMs). 74% of the revenue was at risk, including USD 1.8M (51%) in 25 accounts that had already asked to cancel.
- Acted as the consultative layer on strategic and at-risk accounts: owned adoption, explained the reasoning behind each algorithm decision, and validated new solutions live with the customer. On accounts in crisis, earned trust with quick wins such as store balancing and stock pullback to the DC, then rebuilt confidence with controlled pilots and platform upgrades.
- Recovered USD 1.2M ARR from accounts that were cancelling, 68% of the revenue at risk, and closed at 84% gross revenue retention. Healthy accounts went from 15 to 41, or 27% to 75% of the portfolio, with no viable account lost and none of the healthy ones getting worse.
- Grew the recovered accounts: one contract went up 104% (USD 78K to USD 159K) with a planning module, 6 more bought the forecast module, two clients expanded into new countries (one from a single country to three, after being saved from cancellation), and another went from a 15-store pilot to all 330 stores.
- Kept direct ownership of a few key Brazilian accounts while running the region. On one, out-of-stock dropped from over 20% to 10.84% and inventory went from R\$330M to R\$290M, freeing up R\$40M of working capital.
- Managed contract scope, turning the modules each client had bought into a step-by-step rollout plan. Built a delivery tracker based on Theory of Constraints across 14 projects, and ran 30 platform migrations without losing a single client.

Manager of Customer Success, Brazil | Nov 2024 – May 2025

- Ran Customer Success for 11 enterprise retail accounts in Brazil, advising them on inventory and out-of-stock: forecast is for buying, over longer cycles, while pull-based replenishment and stock balancing between stores react to what actually sells instead of trying to predict it.
- 9.4/10 average client satisfaction in the first quarter, with all 11 accounts answering the survey.

Implementation Expert | Sep 2023 – Nov 2024

- Worked as implementation consultant on 17 enterprise projects across pharmacy, fashion, footwear, home improvement and appliance retail. One of them ran end to end, from manufacturing to distribution.
- Ran the first business meeting, turned what the client needed into algorithms and custom solutions, sent data integration work to engineering, and built the business logic in SQL and Python.
- Built demand forecasting for brand-new products with no sales history, for a footwear retailer sold mostly through franchises: an AI model that estimates demand by comparing each new product to similar ones, plus a layer that keeps every order inside the store's Open-To-Buy budget.

Data & BI Analyst | Jul 2020 – Aug 2023

- Monitored 5 enterprise accounts and 2,000+ stores to catch problems early. At a 1,470-store pharmacy chain, out-of-stock dropped 3 points and inventory 37%.

EDUCATION

BSc, Computer Science (2018 – 2023) and **BSc, Civil Engineering** (2013 – 2017) | Federal University of Pernambuco (UFPE), Brazil
